ABSTRACT OF THE DISCLOSURE

0001

The "E-Learning Biometric Identification Information System" is an information systems technology invention. The "E-Learning Biometric Identification Information System" is both hardware and software. The hardware is a computer keyboard system that randomly based on a mathematical algorithm scans the users fingerprints as they press the keyboard keys. The scan of the fingerprints is then compared to stored fingerprints to determine and confirm the users true identity. The p urpose o f t he " E-Learning B iometric I dentification I nformation S ystem" i s t o g uard a gainst online or distance learning student identification fraud during testing, evaluation or assessments.
